

EXAMPLES OF TEXT ON A PATH

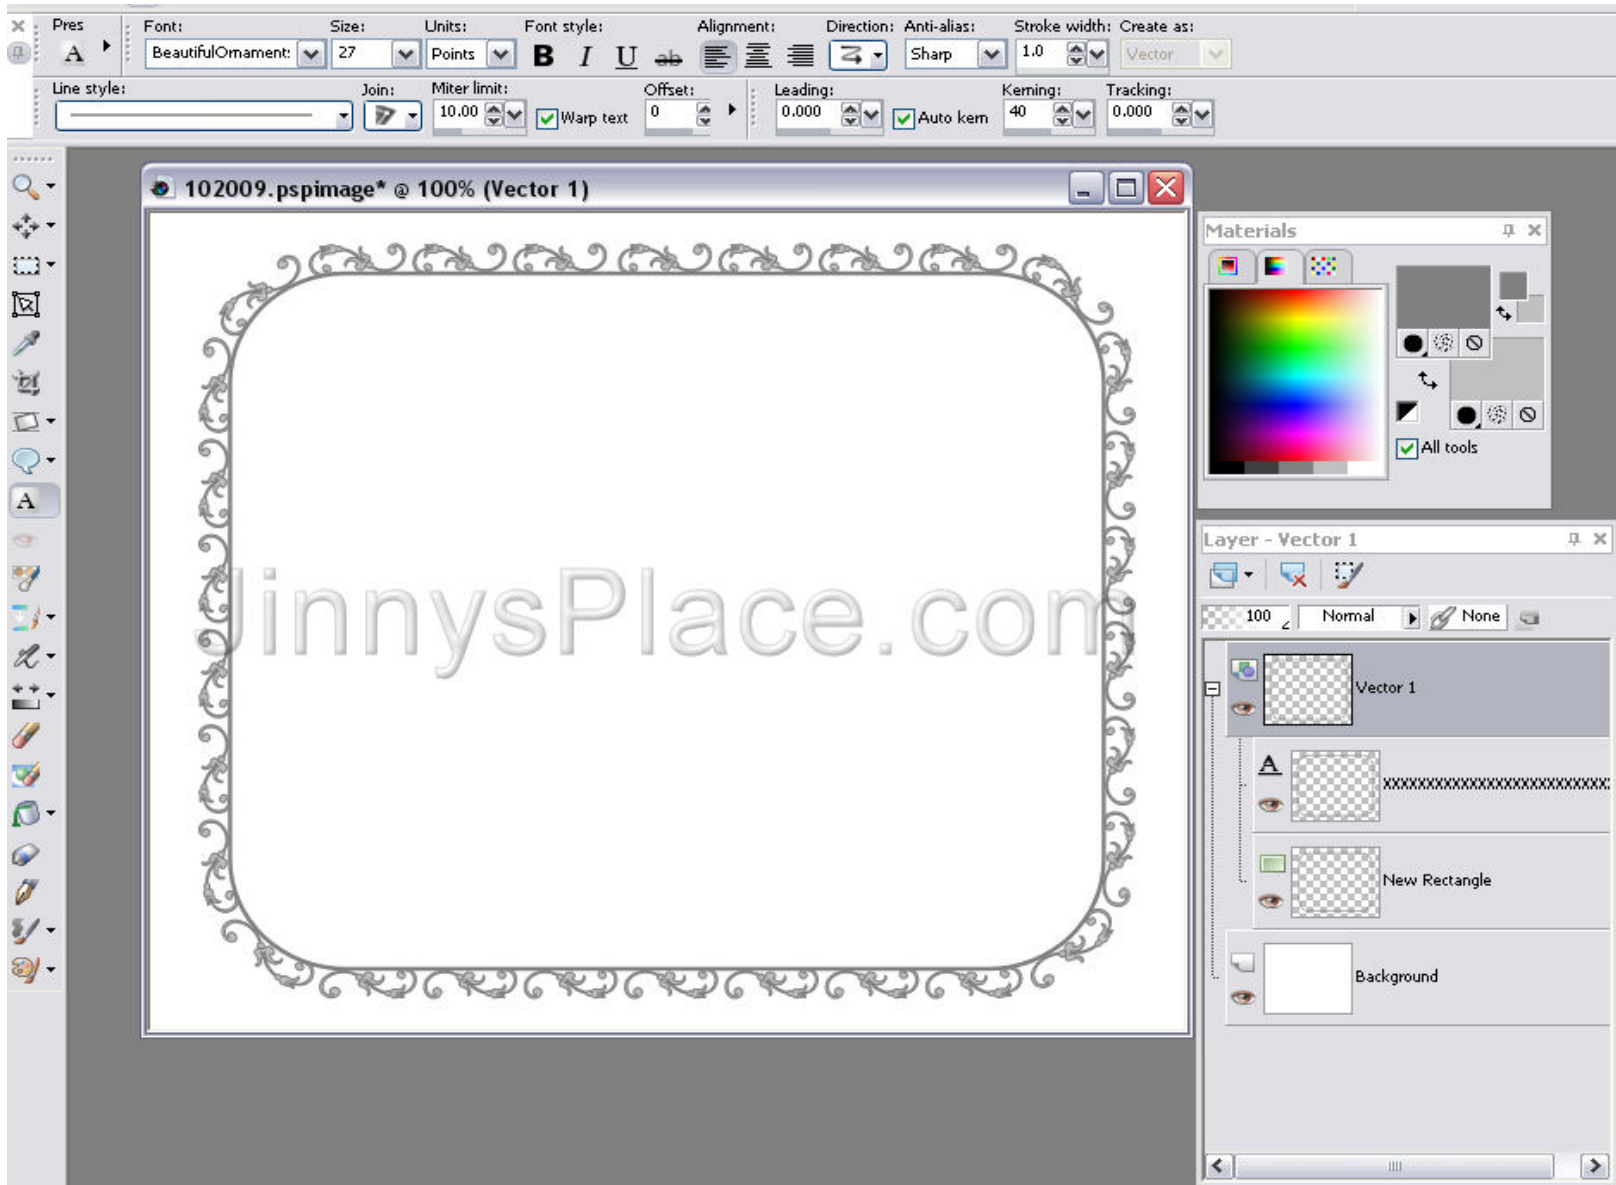

Using the Power of PSP

It's been a long time since I offered a web page tutorial but I decided I would do this in order to show you examples of text on an path and some of the many designs that can be done using this technique. I searched the web and found hundreds of dingbat fonts, since I'm a fontaholic, I now have hundreds more dingbat fonts on my hard drive. :)

The first example is a border using the Ariel.ttf @ sign and font size set to 22 points and a rectangle with the line style set to 4, rounded rectangle.

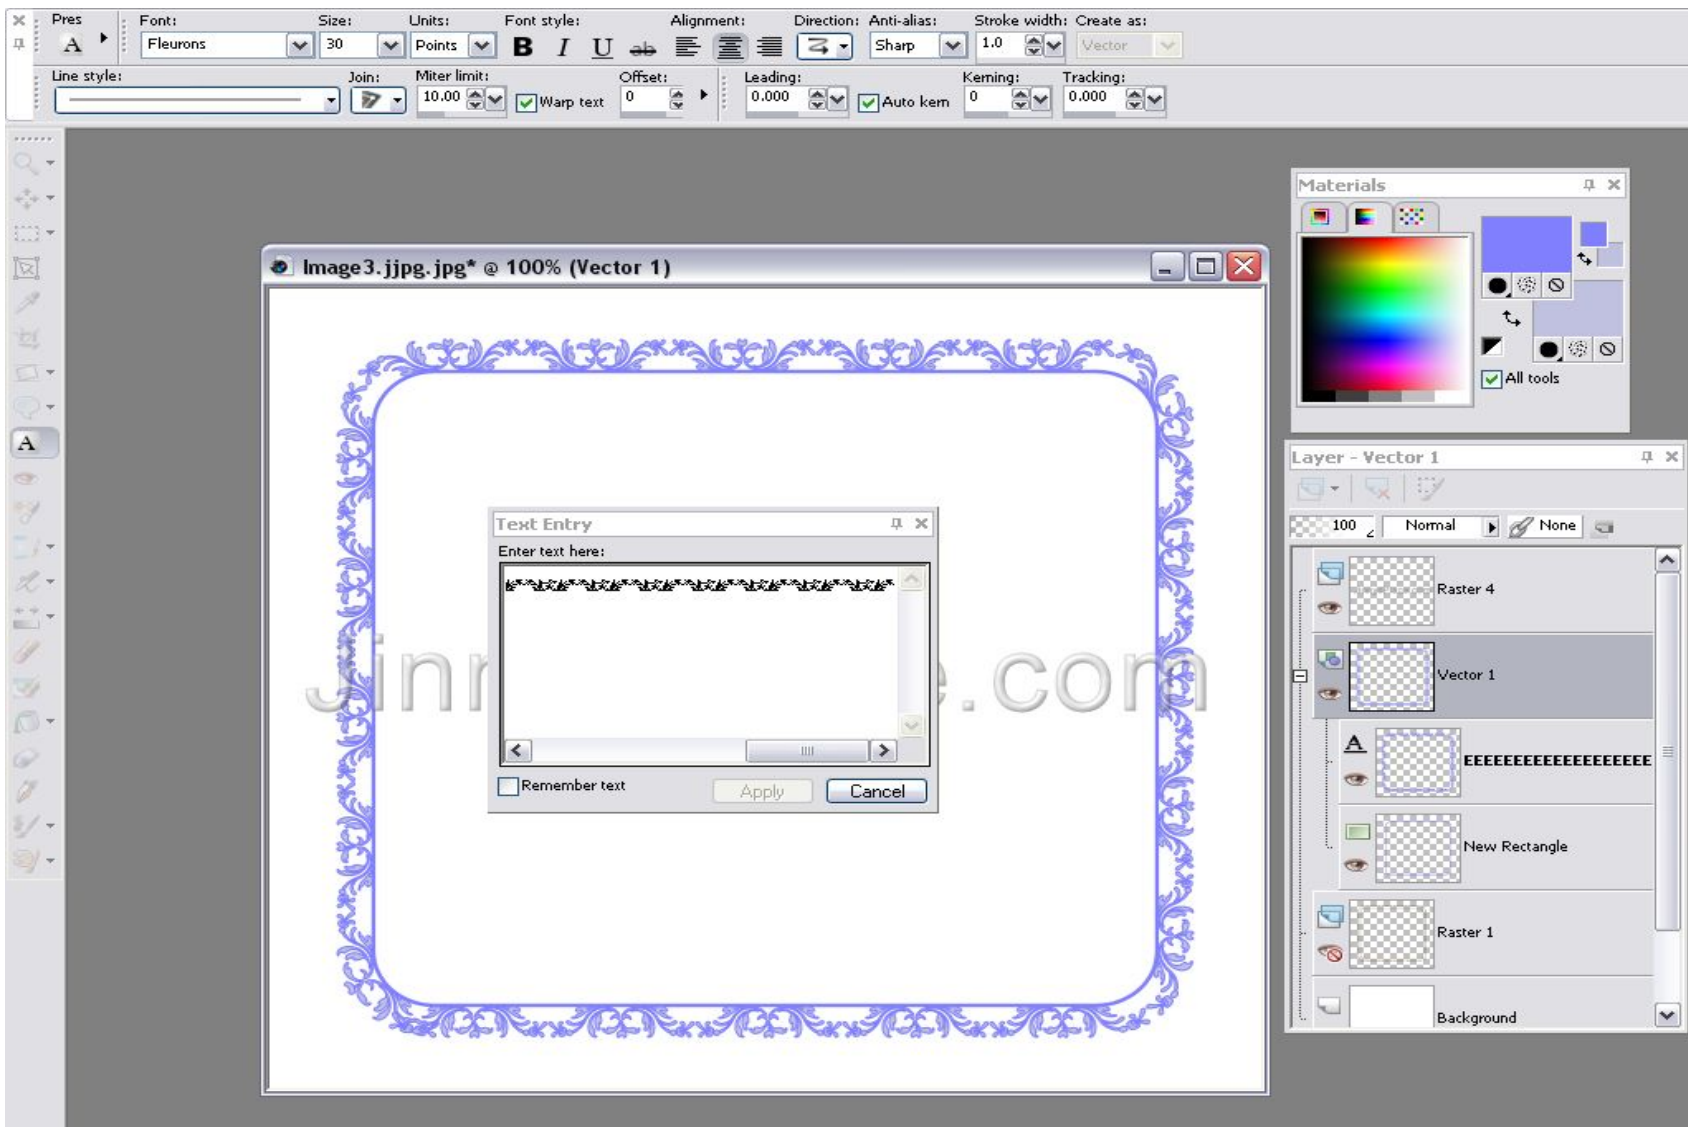

I used a font named Beautiful Ornaments for the next example.

and the result:

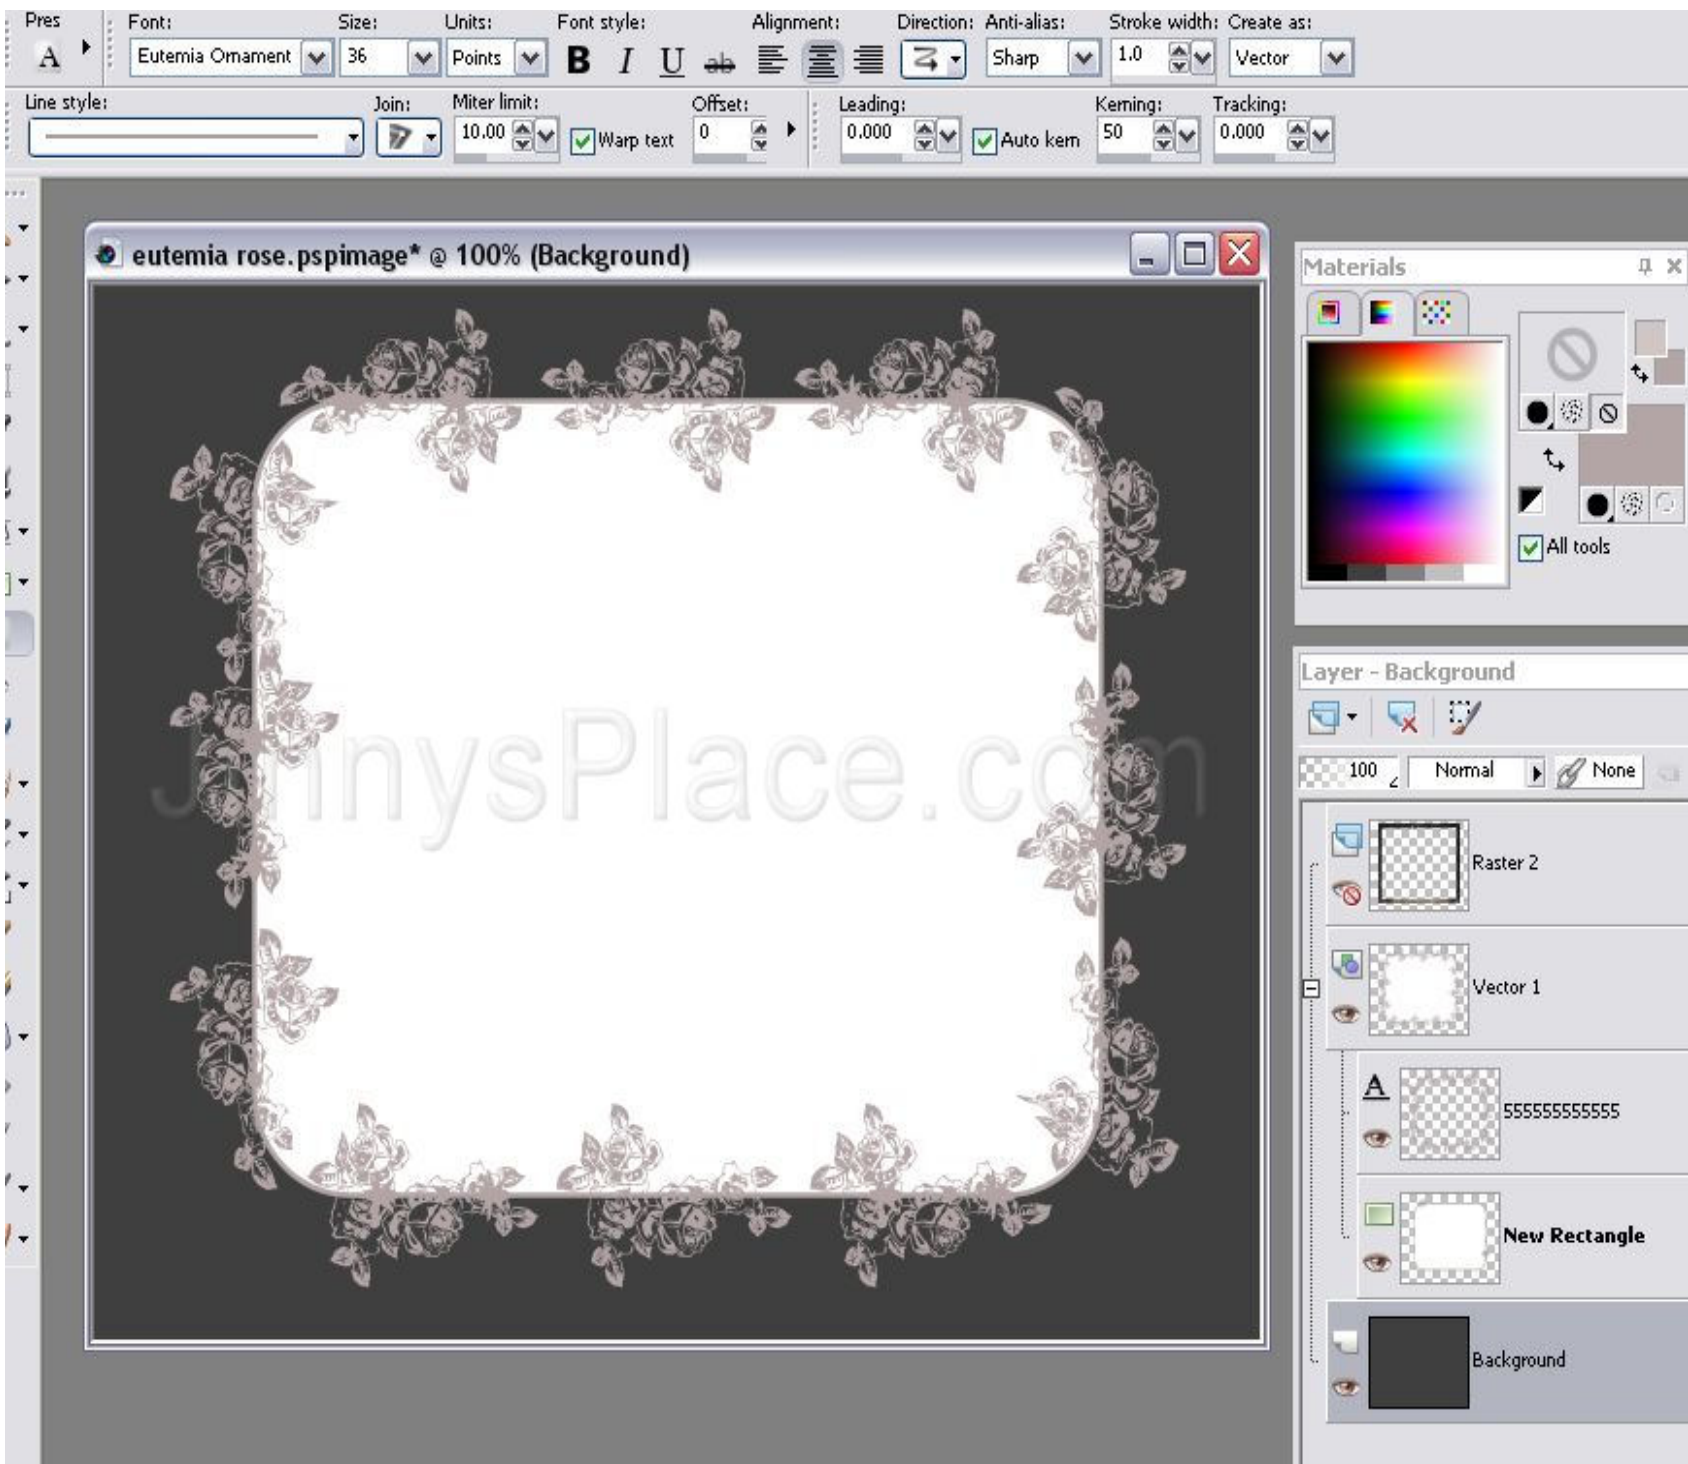

The next example is using Fleurons.ttf

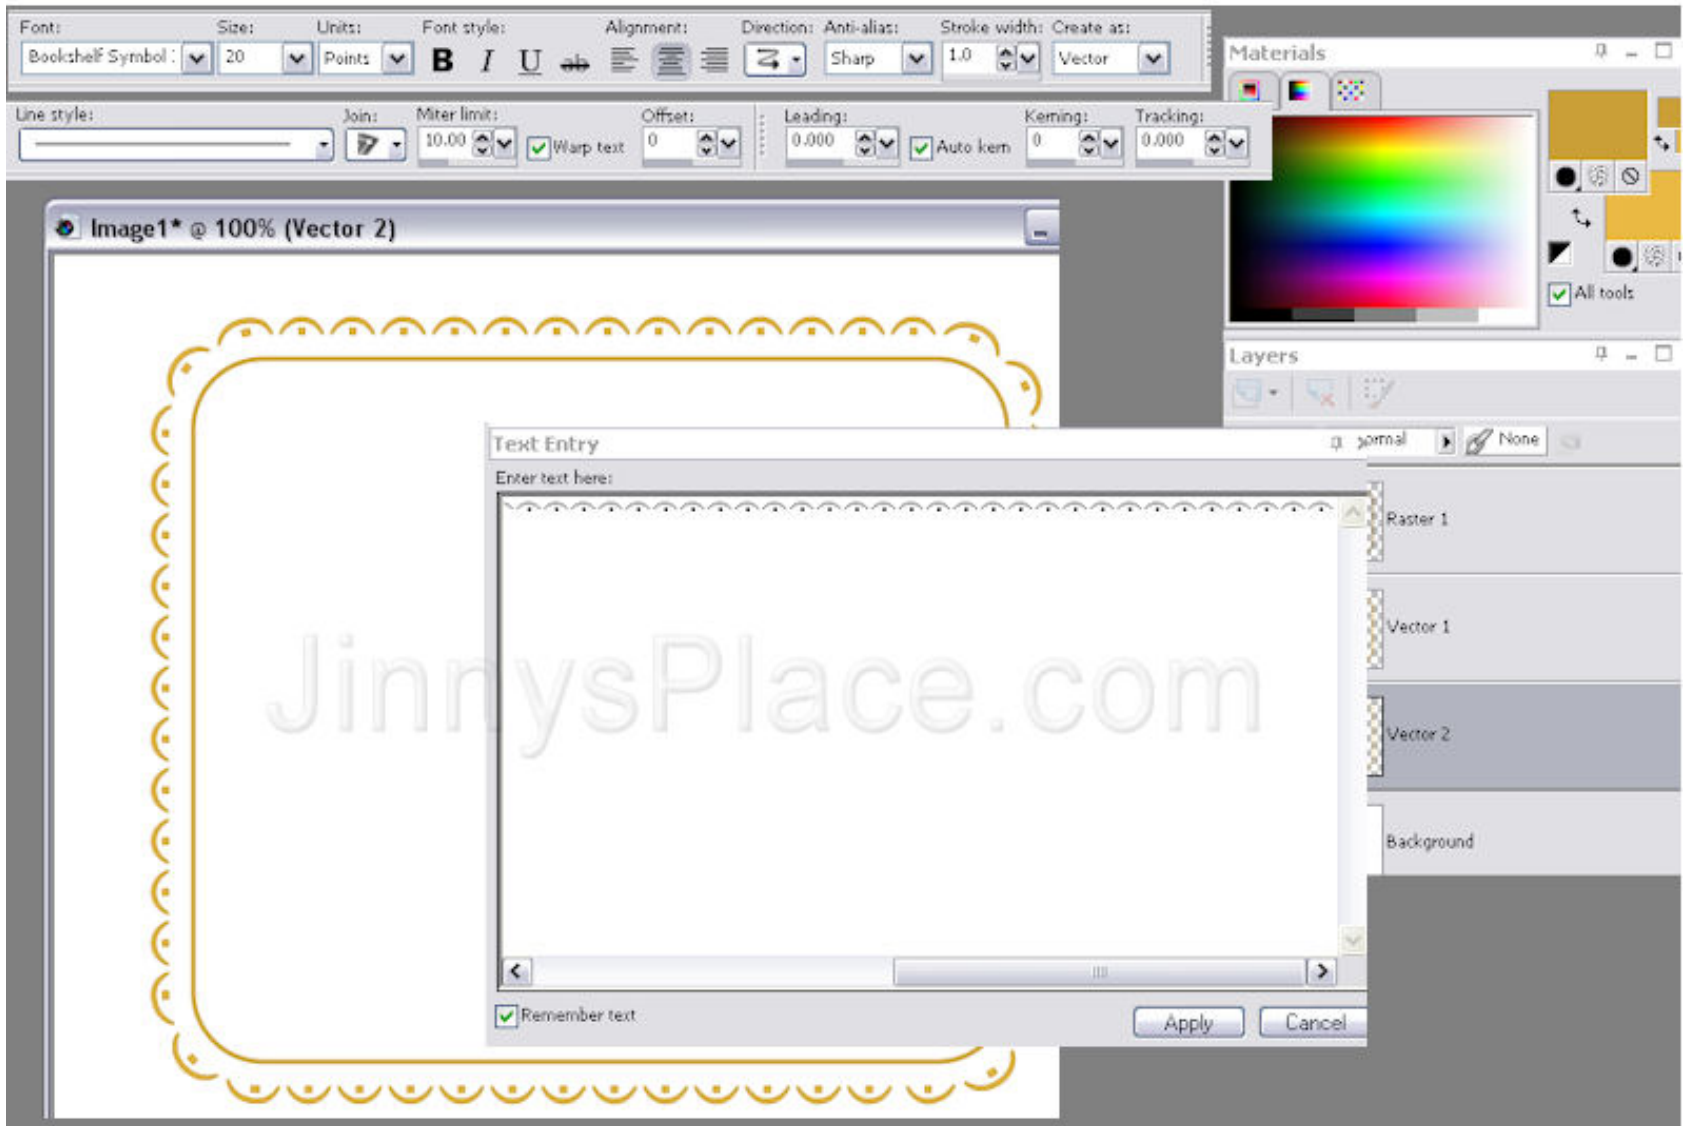

and result:

Font: Eutemia Ornament

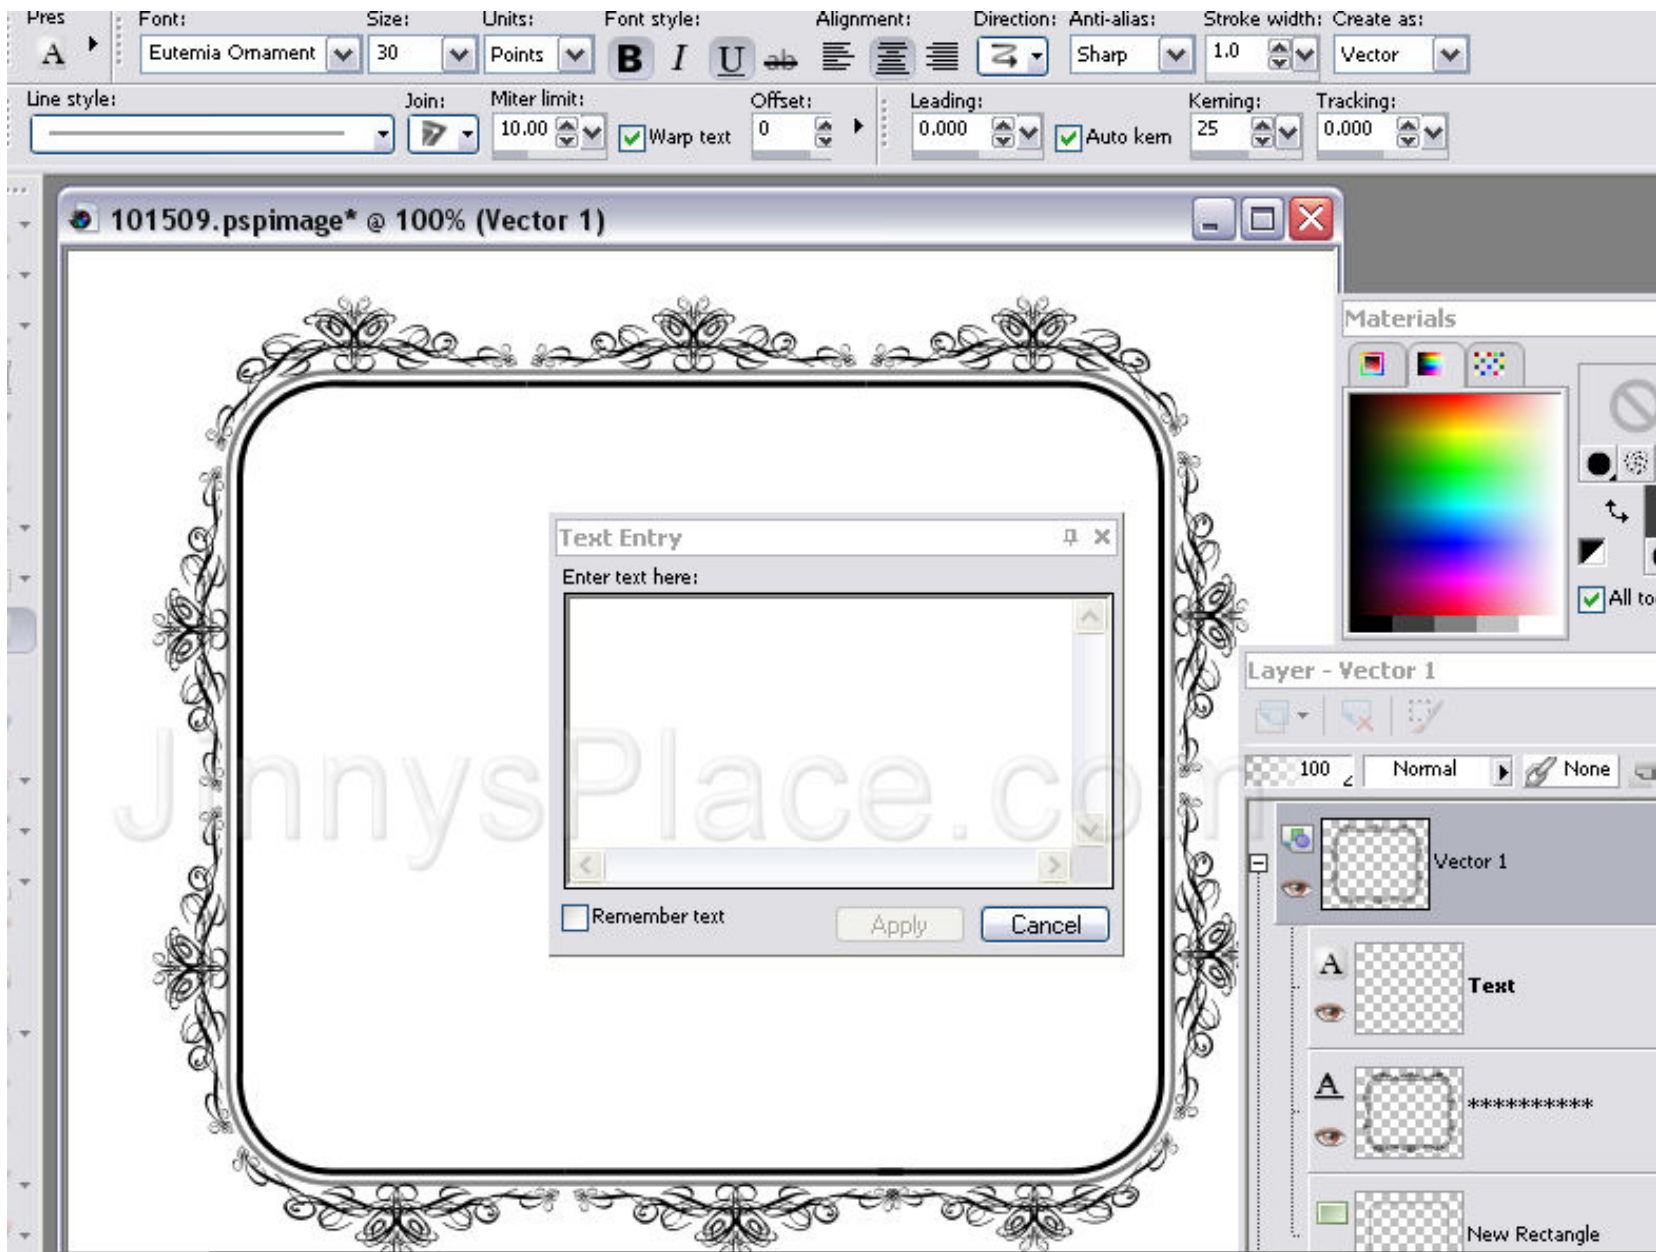

This is my favorite of all the borders that I made, I used Bookshelf Symbols, a font that came bundled with MS Office 2003. It made a lacy effect. Another option for this border is using the diamond line style for the rounded

rectangle.

Eutemia Ornament TTF using the * symbol.

~~*~*

These are just a few of the many borders that I made. I used dingbats or ornamental fonts but I also used symbols and letters from fonts like Ariel and Times Roman. As always, experiment! The tutorial to show you how to make your own border using text on a path is here: [102009](#)

I found most of my free fonts from a wonderful site: [Dafont.com](#)
